Pregnancy Test Popular Culture - Advertisements

Popular Culture: Advertisements

The e.p.t In-Home Early Pregnancy Test is a private little revolution any woman can easily buy at her drugstore...Now its high accuracy rate has been verified here in America by doctors...That means you can confidently do this easy pregnancy test yourself—privately—right at home without waiting for appointments or delays...At last early knowledge of pregnancy belongs easily and accurately to us all.

• -print advertisement for e.p.t, March 1978.

Advertisements for home pregnancy tests appeared in most American women's magazines beginning in 1978. Seemingly aimed at white, middle class women, both married and unmarried, the advertisements appeared in the fashionable Vogue and Mademoiselle alongside articles about movie stars and advertisements for birth control, and in McCall's and Ladies' Home Journal amidst recipes and advertisements for baby food. At the cost of \$10.00 the test kit was affordable for many, certainly, but not cheap. Today, most tests come in sets of two for well under twenty dollars.

Advertisement for ACU-TEST, Mademoiselle, December 1978

The emphasis in the early advertisements wavered between an emphasis on science and a more emotional appeal. The first e.p.t advertisement, for example, featured eight paragraphs of text, a diagram showing the use of the dropper and test tube, and a photograph of the kit itself, showing test tubes suspended in a plastic container. Conversely, the ACU-TEST advertisement from the same year showed a woman's face under the phrase "I wonder if I'm pregnant." Biting her fingernail and looking pensively off camera, the woman embodied the ambivalence that often accompanied this new technology.

In many ways, a pregnancy test is difficult to market. The term "hCG" sounds foreign and the phrase "urine stream" is difficult to sugar coat. The test is so intimate that most advertisements focus on its accuracy or the short time frame to know the answer rather than on the meaning of the results. In the history of healthcare tests, the pregnancy test is unique in that—unlike blood tests for most diseases—a negative result can be cause for celebration for some, despair for others. With a pregnancy test, the reaction to the results is complex and depends on many personal factors.

Whether a woman wants to be pregnant or not, she can now find out whether she is with startling accuracy, ease, and speed unimaginable to previous generations. Though her mother may not even have taken a pregnancy test, today, a woman can find out if she is pregnant four days before a missed period. A private little revolution, indeed.

Below are some early pregnancy test advertisements.

ACU-TEST, 1978. "I wonder if I'm pregnant. New ACU-TEST gives you the answer. At home...in two hours."

Advertisement for e.p.t, Ladies' Home Journal, January 1979.

e.p.t, 1979. "e.p.t in-home early pregnancy test. The only early pregnancy test thousands of American women have used for the past 2 years accurately, safely, privately, in their own homes."

(Though in early 1978 e.p.t had used words like "at last" and "finally" to introduce its new test, by the end of the year, this test had competition. In 1979 the advertisements started claiming that the test had been "introduced in May, 1976." This was most likely a reference to when the test was approved by the FDA and tested by women as part of that approval process.)

Advertisement for e.p.t, Mademoiselle, September 1979.

e.p.t, 1979. "e.p.t is the original in-home early pregnancy test. e.p.t is the only in-home pregnancy test proven accurate by more than a million women."

FACT. The home pregnancy test that gives the fastest possible results.

Advertisement for Fact, Mademoiselle, January 1984.

Fact, 1984. "Fact. The home pregnancy test that gives the fastest possible results."

e.p.t, 1988. "Only e.p.t has sold one test every 30 seconds for the last ten years."
